Infants at Risk of Developmental Delays: Early Behavior-Analytic Interventions

This presentation will:

Illustrate several experiments conducted by Dr. Pelaez and collaborators to identify indicators of an "infant at risk" of developmental delays.

Present several successful behavioral interventions using their mothers during face-to-face interactions.

Present and review results from experiments that show improved social learning and infant development.

Dr. Martha Pelaez is a Frost Professor at the College of Education, Florida International University. She received her Ph.D. in 1992 in developmental psychology, winning the International Dissertation Award from the International Society for Infant Studies. Dr. Pelaez has published more than 70 articles in refereed journals co-authored 13 chapters, one textbook on child development and several monographs. Dr. Pelaez is a Fellow of the American Psychological Association, and also the founder of the Behavior Development Bulletin, where she has served as editor since 1990.
